
 <b>Marwadi University</b> Marwadi Chandarana Group 	<b>Marwadi University</b> <b>Faculty of Engineering &amp; Technology</b> <b>Department of Information and Communication Technology</b>	
<b>Subject: Programming With Python (01CT1309)</b>	<b>Aim:</b> Practical based on Data Loading, Storage and File Formats	
<b>Experiment No: 22</b>	<b>Date:</b>	<b>Enrollment No: 92510133011</b>

**Aim:** Practical based on Data Loading, Storage and File Formats

**IDE:**

load, manipulate, and store data using Python (over reading and writing CSV, JSON, and Excel files)

Library Installation

pip install pandas openpyxl

**Sample Data:**

Create a folder for this experiment and add the following sample data files:

**sample\_data.csv** (Name, Age, City

Alice, 30, New York

Bob, 25, Los Angeles

Charlie, 35, Chicago)

**sample\_data.json** ([

{"Name": "David", "Age": 28, "City": "San Francisco"},

{"Name": "Eve", "Age": 22, "City": "Seattle"}]

)

**sample\_data.xlsx** (you can create this using Excel with similar data)\

Loading Data from CSV

Read the CSV file and perform basic data manipulation.

import pandas as pd

# Load data from CSV

 <b>Marwadi University</b> Marwadi Chandarana Group 	<b>Marwadi University</b> <b>Faculty of Engineering &amp; Technology</b> <b>Department of Information and Communication Technology</b>	
<b>Subject: Programming With Python (01CT1309)</b>	<b>Aim:</b> Practical based on Data Loading, Storage and File Formats	
<b>Experiment No: 22</b>	<b>Date:</b>	<b>Enrollment No: 92510133011</b>

```
csv_file_path = 'sample_data.csv'
```

```
df_csv = pd.read_csv(csv_file_path)
```

```
# Display the DataFrame
```

```
print("CSV Data:")
```

```
print(df_csv)
```

```
# Basic data manipulation: Filter by age
```

```
filtered_data = df_csv[df_csv['Age'] > 30]
```

```
print("\nFiltered Data (Age > 30):")
```

```
print(filtered_data)
```

**Output:**

```
CSV Data:
```

```

      Name  Age      City
0   Alice   30  New York
1    Bob   25  Los Angeles
2  Charlie   35   Chicago
```

```
Filtered Data (Age > 30):
```

```

      Name  Age      City
2  Charlie   35  Chicago
```

Loading Data from JSON

Read the JSON file and manipulate the data.

```
# Load data from JSON
```

 <b>Marwadi University</b> Marwadi Chandarana Group 	<b>Marwadi University</b> <b>Faculty of Engineering &amp; Technology</b> <b>Department of Information and Communication Technology</b>	
<b>Subject: Programming With Python (01CT1309)</b>	<b>Aim:</b> Practical based on Data Loading, Storage and File Formats	
<b>Experiment No: 22</b>	<b>Date:</b>	<b>Enrollment No: 92510133011</b>

```
json_file_path = 'sample_data.json'
```

```
df_json = pd.read_json(json_file_path)
```

```
# Display the DataFrame
```

```
print("\nJSON Data:")
```

```
print(df_json)
```

```
# Basic data manipulation: Find the average age
```

```
average_age = df_json['Age'].mean()
```

```
print("\nAverage Age:", average_age)
```

**Output:**

```
JSON Data:
   Name  Age  City
0 David   28  San Francisco
1  Eve   22   Seattle

Average Age: 25.0
```

Loading Data from Excel

Read the Excel file and display its contents.

```
# Load data from Excel
```

```
excel_file_path = 'sample_data.xlsx'
```

```
df_excel = pd.read_excel(excel_file_path)
```

 <b>Marwadi University</b> Marwadi Chandarana Group 	<b>Marwadi University</b> <b>Faculty of Engineering &amp; Technology</b> <b>Department of Information and Communication Technology</b>	
<b>Subject: Programming With Python (01CT1309)</b>	<b>Aim:</b> Practical based on Data Loading, Storage and File Formats	
<b>Experiment No: 22</b>	<b>Date:</b>	<b>Enrollment No: 92510133011</b>

# Display the DataFrame

```
print("\nExcel Data:")
```

```
print(df_excel)
```

# Basic data manipulation: Count the number of entries

```
entry_count = df_excel.shape[0]
```

```
print("\nNumber of entries in Excel file:", entry_count)
```

**Output:**

```
Excel Data:
   Name  Age      City
0  Alice  30  New York
1   Bob   25  Los Angeles
2 Charlie  35   Chicago
3  David  28  San Francisco
4   Eve   22   Seattle
```

Writing Data to Different Formats

Save manipulated DataFrames to new files in different formats.

# Save filtered CSV data to a new file

```
filtered_data.to_csv('filtered_data.csv', index=False)
```

```
print("\nFiltered data saved to 'filtered_data.csv'.")
```

 <b>Marwadi University</b> Marwadi Chandarana Group 	<b>Marwadi University</b> <b>Faculty of Engineering &amp; Technology</b> <b>Department of Information and Communication Technology</b>	
<b>Subject: Programming With Python (01CT1309)</b>	<b>Aim:</b> Practical based on Data Loading, Storage and File Formats	
<b>Experiment No: 22</b>	<b>Date:</b>	<b>Enrollment No: 92510133011</b>

# Save DataFrame to a new JSON file

```
df_json.to_json('new_data.json', orient='records', lines=True)
```

```
print("JSON data saved to 'new_data.json'.")
```

# Save DataFrame to a new Excel file

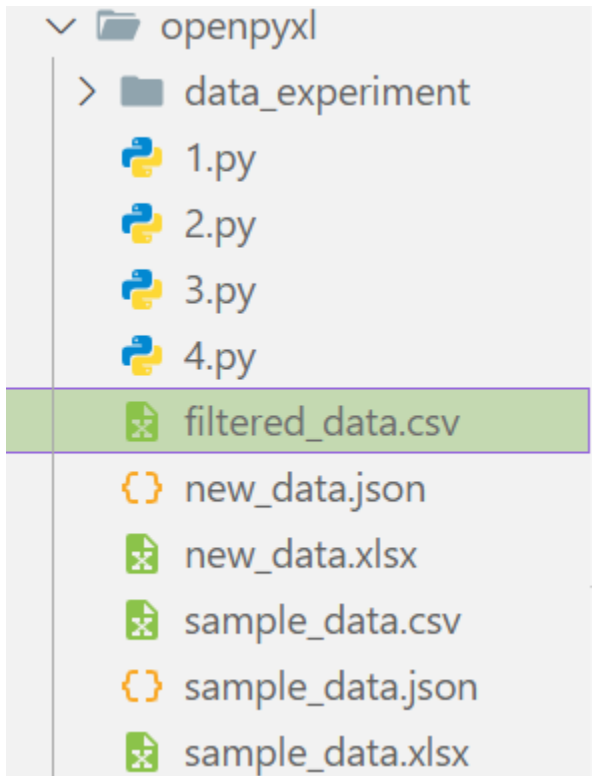

```
df_excel.to_excel('new_data.xlsx', index=False)
```

```
print("Excel data saved to 'new_data.xlsx'.")
```

**Output:**

A1		fx   Name			
	A	B	C	D	E
1	Name	Age	City		
2	Alice	30	New York		
3	Bob	25	Los Angeles		
4					
5					
6

### Post Lab:

Write a code snippet to check the data types of each column in a DataFrame.

### Code:

```
import pandas as pd

df_csv = pd.read_csv(r"D:\SEM 3 Subjects\Python\openpyxl\sample_data.csv")
df_json = pd.read_json(r"D:\SEM 3 Subjects\Python\openpyxl\sample_data.json")
df_excel = pd.read_excel(r"D:\SEM 3 Subjects\Python\openpyxl\sample_data.xlsx")
def check_data_types(df, name):
    print(f"\nData Types for {name}:")
    print(df.dtypes)

check_data_types(df_csv, "CSV DataFrame")
check_data_types(df_json, "JSON DataFrame")
check_data_types(df_excel, "Excel DataFrame")
```

 <b>Marwadi University</b> Marwadi Chandarana Group 	<b>Marwadi University</b> <b>Faculty of Engineering &amp; Technology</b> <b>Department of Information and Communication Technology</b>	
<b>Subject: Programming With Python (01CT1309)</b>	<b>Aim:</b> Practical based on Data Loading, Storage and File Formats	
<b>Experiment No: 22</b>	<b>Date:</b>	<b>Enrollment No: 92510133011</b>

### Output:

Data Types for CSV DataFrame:

```
Name    object
Age      int64
City     object
dtype: object
```

Data Types for JSON DataFrame:

```
Name    object
Age      int64
City     object
dtype: object
```

Data Types for Excel DataFrame:

```
Name    object
Age      int64
City     object
dtype: object
PS D:\SEM 3 Subjects\Python>
```

Write a code snippet that demonstrates how to fill missing values with the mean of a column.

### Code:

```
import pandas as pd
import numpy as np

df_csv = pd.read_csv(r"D:\SEM 3 Subjects\Python\openpyxl\sample_data.csv")
df_json = pd.read_json(r"D:\SEM 3 Subjects\Python\openpyxl\sample_data.json")
df_excel = pd.read_excel(r"D:\SEM 3 Subjects\Python\openpyxl\sample_data.xlsx")

df_csv.loc[1, 'Age'] = np.nan # CSV DataFrame
df_json.loc[1, 'Age'] = np.nan
df_excel.loc[1, 'Age'] = np.nan
```

 <b>Marwadi University</b> Marwadi Chandarana Group 	<b>Marwadi University</b> <b>Faculty of Engineering &amp; Technology</b> <b>Department of Information and Communication Technology</b>	
<b>Subject: Programming With Python (01CT1309)</b>	<b>Aim:</b> Practical based on Data Loading, Storage and File Formats	
<b>Experiment No: 22</b>	<b>Date:</b>	<b>Enrollment No: 92510133011</b>

```
def fill_missing_with_mean(df, name):
    df['Age'] = df['Age'].fillna(df['Age'].mean())
    print(f"\n{name} after filling missing 'Age' values with mean:")
    print(df)

fill_missing_with_mean(df_csv, "CSV DataFrame")
fill_missing_with_mean(df_json, "JSON DataFrame")
fill_missing_with_mean(df_excel, "Excel DataFrame")
```

#### Output:

```
CSV DataFrame after filling missing 'Age' values with mean:
   Name  Age  City
0  Alice 30.0 New York
1   Bob 32.5 Los Angeles
2 Charlie 35.0  Chicago

JSON DataFrame after filling missing 'Age' values with mean:
   Name  Age  City
0 David 28.0 San Francisco
1  Eve 28.0  Seattle

Excel DataFrame after filling missing 'Age' values with mean:
   Name  Age  City
0  Alice 30.00  New York
1   Bob 28.75  Los Angeles
2 Charlie 35.00  Chicago
3  David 28.00 San Francisco
4  Eve 22.00  Seattle
```
